No	Version	Date	Contents	Written	Note
1	2.1.5	17.08.05	Initial Release	John	
2	2.1.6	17.08.08	Modified a picture (Power Cable, Smart phone Calibration, PC Calibration)	John	
3	2.1.7	17.08.09	Addition FMS cable	John	
4	2.1.8	17.08.10	Addition Recording Hours	John	
5	2.1.9	17.08.17	Modified product components	John	
6	2.2.0	17.09.14	Modified product accessory	Hugh	

## **1 General**

MDAS installation requires wiring electric signals of vehicles. Please contact your local distributor or authorized installers to install. Movon will hold no liability of any damage occurred during installation proceeded by users, or unauthorized installers.

MDAS is developed to give only warnings to drivers. The final decision to maneuver or control shall be made by drivers themselves. Furthermore, MDAS is not capable to provide 100% detection rate of lane markings, vehicles, and MDAS recognition performance can be fluctuated due to road conditions, inclement weather, poor installation, etc. Please ensure that keep eyes forward while driving rather than only relying on MDAS.

## 2 Product

### 2.1 Specification

CPU	Cortex A7 Quad-Core	
Audio Out	Speaker	
Camera	Front	1280 x 720 (HD)
	Rear	1280 x 720 (HD)
Power	Input Range	DC 10V ~ 36V
	Power Consumption	400mA @ 12V Max 3mA @ 12V Idle State
Format	Video	AVI (h.264 codec)
	Audio	PCM
Storage	4~128GB Micro SD card support	
Input / Output	Main	Micro 5pin USB port, Micro SD Card, GPS port
	PCI Box	Main Cable, Vibrator, Analog, Indicator, FMS, Video OUT, CAN, POWER, Fuse
Size	Body	80 x 120 x 50 mm
Temperature	Operation	-20°C ~ 70°C (-4°F ~ 158°F)
	Storage	-40°C ~ 85°C (-40°F ~ 185°F)

## 2.2 Product components

Main unit	Basic cable (3P Power, 5P Analog)	Micro SD card	Indicator
			
Technical cleaning wipe	PCI Box	CAN Cable	
			

Rear Camera (Optional)	Contactless CAN Reader (Optional)	Video Out Cable (Optional)	GPS (Optional)
			
Vibrator (Optional)	Micro 5PIN USB cable (Optional for installers)	Wi-Fi Dongle (Optional for installers)	FMS Cable (Optional)
			
External Fuse (Optional)			
			

## 2.3 Main Unit & Main Cable

### 2.3.1 Main Unit

#### 2.3.1.1 Parts description

#### 2.3.1.2 Mounting Frame and Back Cover

### 2.3.1.3 LED Description

LED Status				
				
Illuminate	Blink	Illuminate	Blink	Blink
Booting	Turn signal (L, R) Before booting	Working mode	Initialization Calibration Mode	Firmware Update

### 2.3.2 Main Cable

### 2.4 Contactless CAN Reader

### 2.5 Indicator

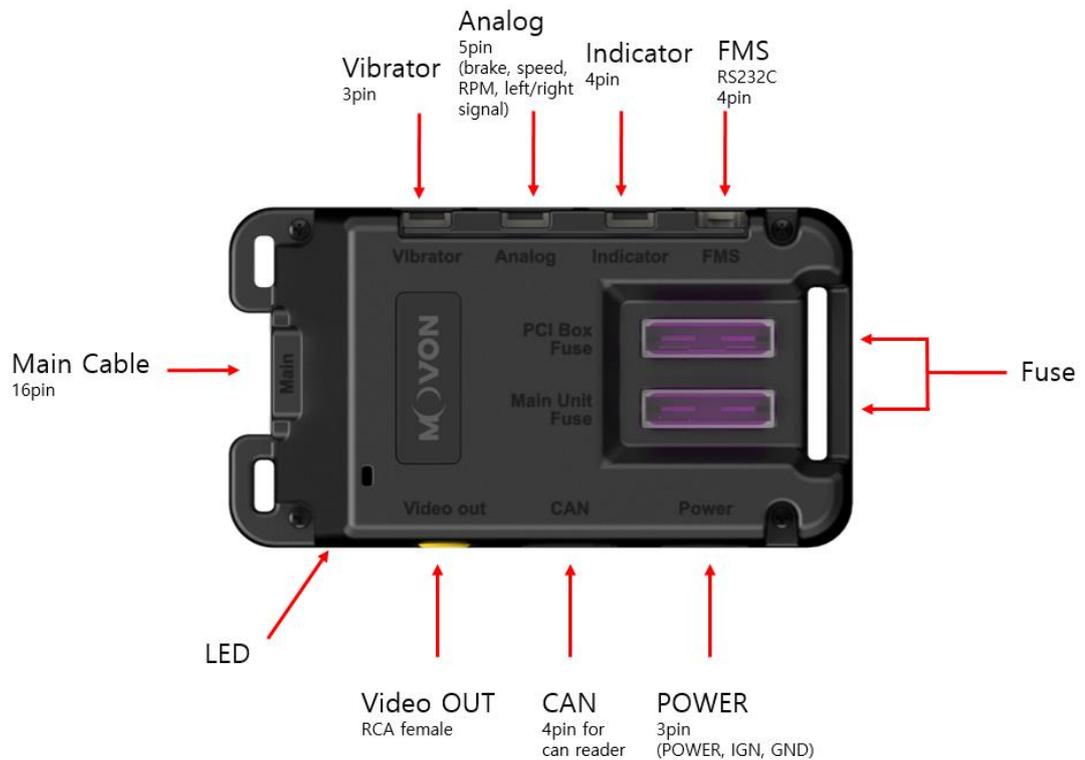

Read user manual to see more description and functions.

Indicator Error Table				
Camera Connection Error	CAN Communication Error	Camera View Block Error	Indicator Communication Error	Low Visibility Indication

## 2.6 Peripheral Component Interconnect Box (PCI Box)

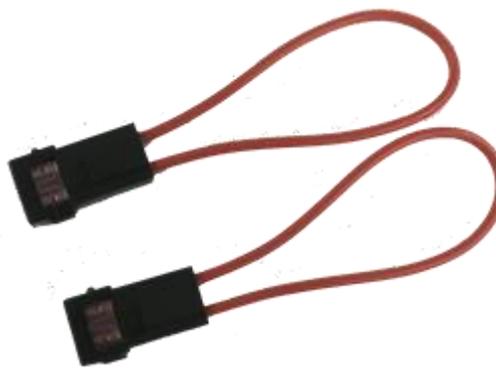

Peripheral Component Interconnect Box (PCI Box) is to connect the cables and accessories.

PCI BOX LED status table	
Color	status
Yellow	In case of wiring only constant power
Green	In case of wiring constant power and ACC power

## 2.7 External Fuse

MDAS-9 provides with an External Fuse to prevent from short circuiting the vehicle electrical system.

## 2.8 Technical Cleaning Wipe

MDAS-9 provides Technical Cleaning Wipe for cleaning and removing dust, finger print on windshield.

## 2.9 Vibrator (Optional)

\* NOTE: Need Vibrator gender cable to use this and need to enable in Calibration. Read details in Chapter 4. Calibration

Fleet management setup

1. Speed limit warning	Off ▼
2. Transmit data RS-232	Off ▼
3. Lock volume button control	Off ▼
4. Break time alarm	Off ▼
5. Vibration device	
5-1. Lane departure warning	Off ▼
5-2. Forward collision warning	Off ▼
5-3. Pedestrian collision warning	Off ▼

## 2.10 GPS (Optional)

\* Important, in case of use GPS for speed signal, warning timing can be inaccurate in decelerating circumstances.

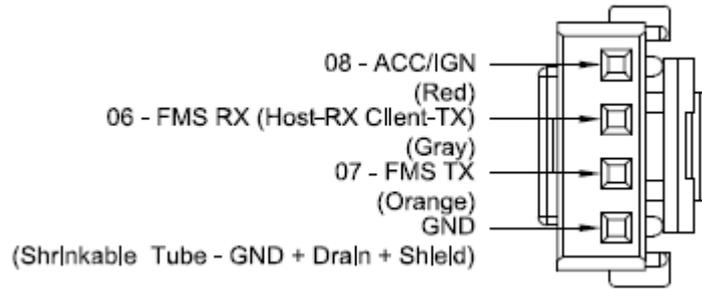

## 2.11 Video Out Cable (Optional)

Transmit analog video to another device using RCA connector.

## 2.12 FMS Cable (Optional)

Transmit ADAS event data to Fleet Management System through RS-232 and CAN interfaces.

### 2.13 Micro SD Card (Expendable)

\* Micro SD card is expendable, only first 3 months are guaranteed. It is recommended to format micro SD card regularly and replace it when it cannot be recognized in MDAS.

\*\* Micro SD card speed shall be above **Class 10** and it is recommended to use **MLC type**.

Total Recording Hours (approximately)		
Memory Storage	Normal + Event + User	
	1CH	2CH
8GB	About 1 hour and 45 minutes	About 45 minutes
16GB	About 3 hours and 40 minutes	About 1 hour and 45 minutes
32GB	About 7 hours and 30 minutes	About 3 hours and 40 minutes
64GB	About 15 hours and 20 minutes	About 7 hours and 30 minutes

#### 2.14 Wi-Fi Dongle (Optional for calibration)

Use for Calibration procedures for Android OS Phones.

Application can be downloaded in Google Play Store.

#### 2.15 Micro 5 pin USB Cable (Optional for Calibration)

\* NOTE: You can use a common USB cable that supports data transmission.

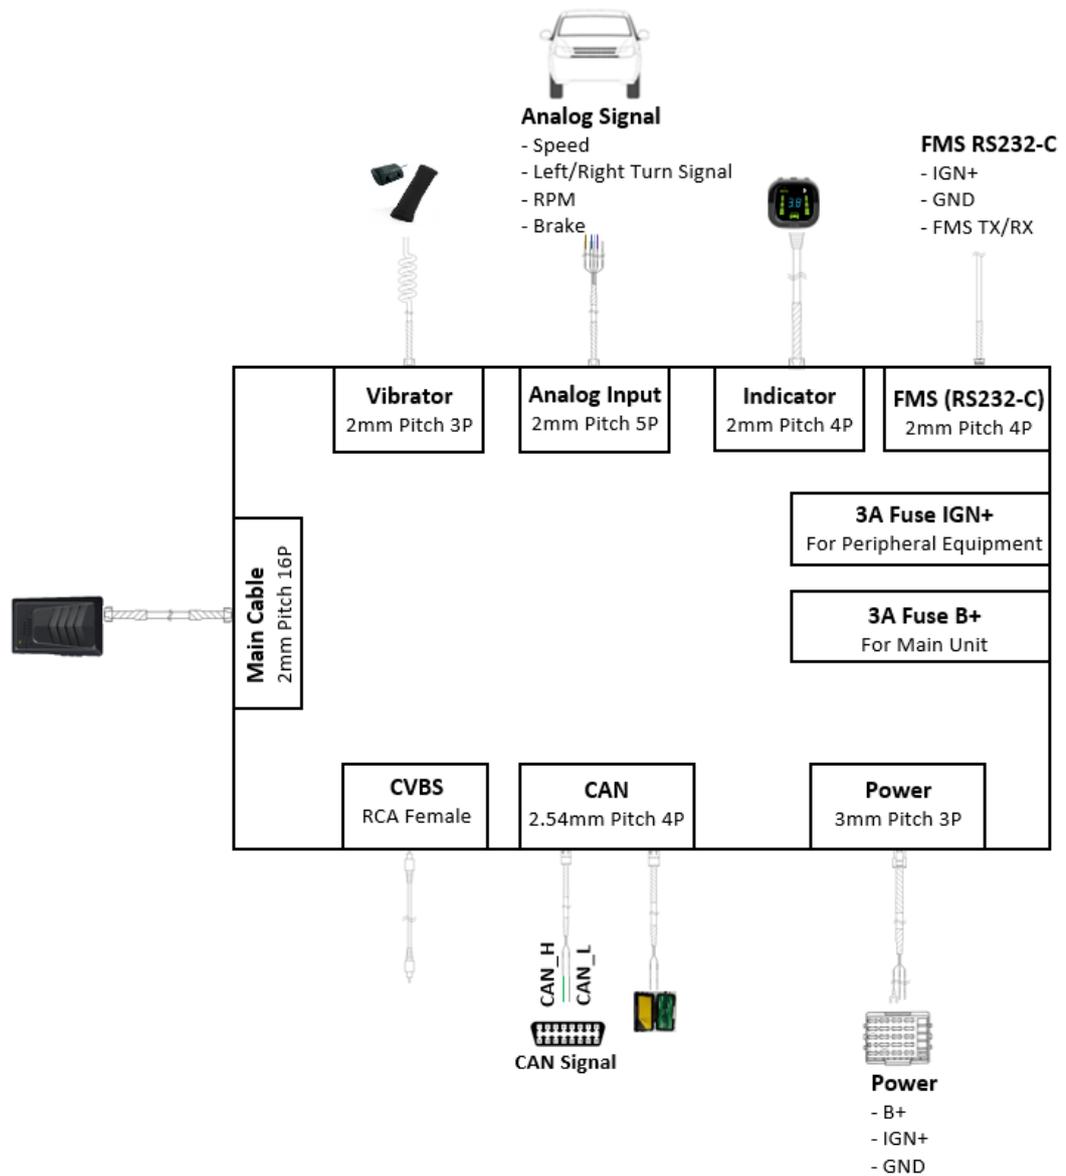

Use for Calibration procedures for **Windows OS** computers.

Before use, please install RNDIS driver, first. (See Chapter 4.1)

### 3 Installation

#### 3.1 System Connection Scheme

#### 3.2 Installation Procedure

- ① Check which types of signals the vehicle provides (CAN/Analog)
- ② Connect vehicle signals (See Chapter 3.3 Wiring Combination)
- ③ Attach MDAS-9 (and indicator if needed) to the vehicle
- ④ Connect cables with MDAS-9
- ⑤ Access MDAS-9 using Micro 5pin USB cable or Wi-Fi dongle
- ⑥ Calibration (See Chapter 4. Calibration procedure)
- ⑦ Test drive

### 3.3 Wiring Combination and Description

#### 3.3.1 16Pin Main Cable

\* NOTE: Label color could be different due to production, please check label tags before wiring.

#### 3.3.2 5Pin Analog Cable

Color	Label	Connection Description
Blue	SIG_R	To analog right turn signal
Light Blue / White Stripe	SIG_L	To analog left turn signal
Brown / White Stripe	SPEED	To analog speed signal, be careful with old vehicles that do not have speed sensor
Violet	RPM	To analog RPM signal
Black / White Stripe	BRAKE	To analog BRAKE signal

### 3.3.3 4Pin CAN Cable

Color	Label	Connection Description	
White	CAN_H	To CAN High wire	Support CAN J1939 standard & CAN 2.0 (Support Version A, B)
Green	CAN_L	To CAN Low wire	

### 3.3.4 3Pin Power Cable

Color	Label	Connection Description	
Yellow	POWER	Power for the main unit. <b><u>To ignition (ACC) power</u></b> wire that turns off when key is at OFF	
Red	IGN	Power for optional accessories. <b><u>To ignition (ACC) power</u></b> wire that turns off when key is at OFF	
Black	GND	To ground source * Please ensure that is connected properly to ground, or it could damage the vehicle and MDAS.	

\*Note : Connect Power cable and IGN cable together to ignition (Accessory) power.

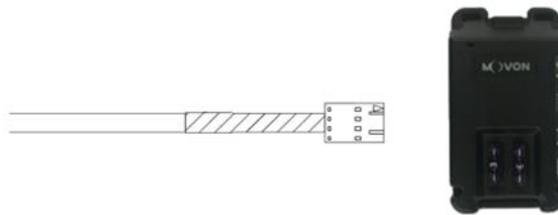

\* There are different ignition powers, it is recommended to use an ignition power (ACC, IG1) that does not drop power shortly when the engine turns on.

### 3.3.5 Contactless CAN Reader

### 3.3.5.1 Wiring with Contactless CAN Reader

- ① Connect Contactless CAN Reader to PCI box of MDAS-9.

- ② Remove double-sided tape

- ③ Attach the vehicle's CAN wire as straight as possible to the double-sided tape by aligning with the hole marked in red.

\* Like this picture, place CAN\_L to the left and CAN\_H to the right!

- ④ After case assembly, if installing CAN\_H and CAN\_\_L correctly, the red LED lights operates on the lower left side of the case as shown in the picture when the vehicle is “Key on”.

\* After checking on operating of LED lights correctly, tie with a cable tie marked in yellow.  
(If CAN\_H and CAN\_L wires are attached in reverse, LED lights does not work.)

### 3.3.6 Wiring Combination

- \* NOTE: See cable description table below.
- \* NOTE: You can see Vehicle Database to check CAN-BUS availability.  
Visit <http://info.mdas.co.kr> and check information before installation.
- \* NOTE: If you don't use whole analog cable, you should wire the remaining cable of 5Pin analog with ground.

No.	Speed	Turn signal	Recommended connection
-----	-------	-------------	------------------------

1	CAN-BUS	CAN-BUS	4PIN CAN Cable or Contactless CAN Reader Use 4PIN CAN Cable or Contactless CAN Reader for speed and turn signals.
2	CAN-BUS	Analog	4PIN CAN Cable or Contactless CAN Reader + 5PIN Analog Cable Use 4PIN for speed, and 5PIN for analog turn signals.
3	Analog	Analog	5PIN Analog Cable Use 5Pin for analog speed signal and turn signals.
4	GPS	Analog	5PIN Analog Cable + GPS

### 3.4 Attach MDAS-9

- ① Before attaching MDAS-9, clean and remove dust, finger prints on the desired installation area with technical cleaning wipe and mark the center of windshield.

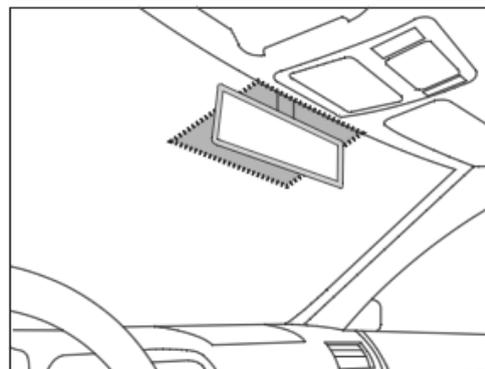

\*NOTE: It is very important to attach MDAS-9 at the center for the best performance.

If MDAS-9 cannot be attached at the center, due to interior or space, attach MDAS-9 as close as possible to the center. You can adjust the difference during Calibration in Chapter 4.

MDAS-9 Should not be attached more than 10cm (4inches) apart from the center.

For trucks/buses

For passenger cars

MDAS-9 can change the cable layout as below for trucks/buses. Please refer to below procedure in Chapter 3.6 to change cable layout.

For trucks/buses

For passenger cars

- ② Attach MDAS-9 to windshield.

- ③ Insert a small screw driver into small holes marked in red in the Main Unit Back Cover and press the bracket to separate.

- ④ Unscrew two cross recessed bolt marked in red to remove the Upper Back Cover.

- ⑤ Adjust the camera angle knob.  
(Refer to Chapter 4.2.6 to adjust the camera angle completely)

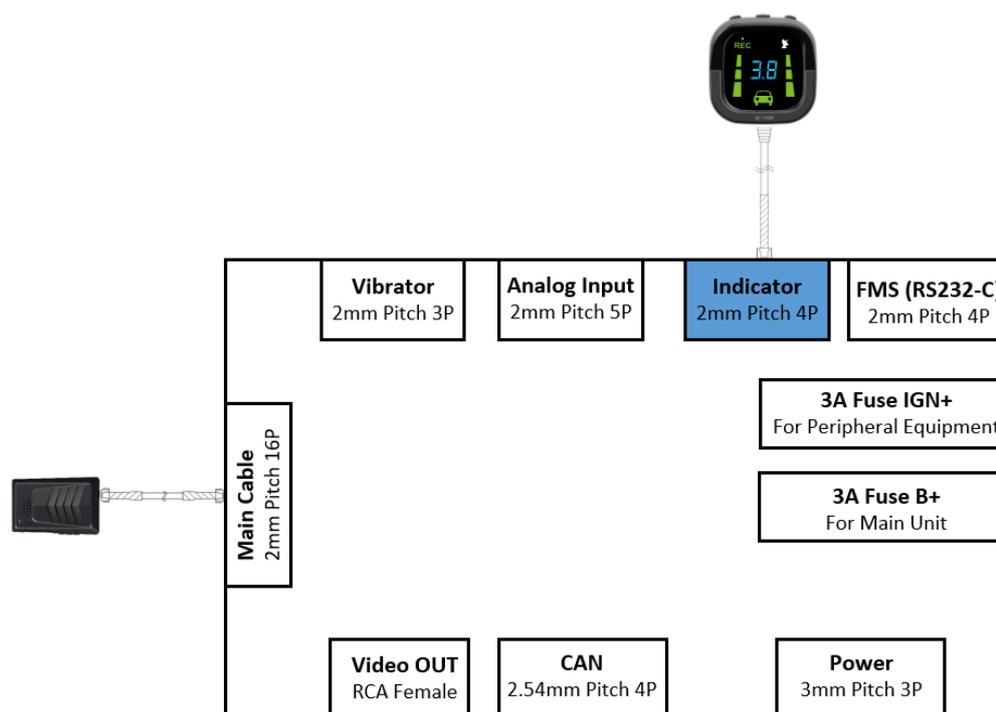

\*NOTE: Do not reassemble the Back Cover before completing Calibration procedure.

\*NOTE: In case of installing rear camera, refer to Chapter 3.6

### 3.5 Parts connection

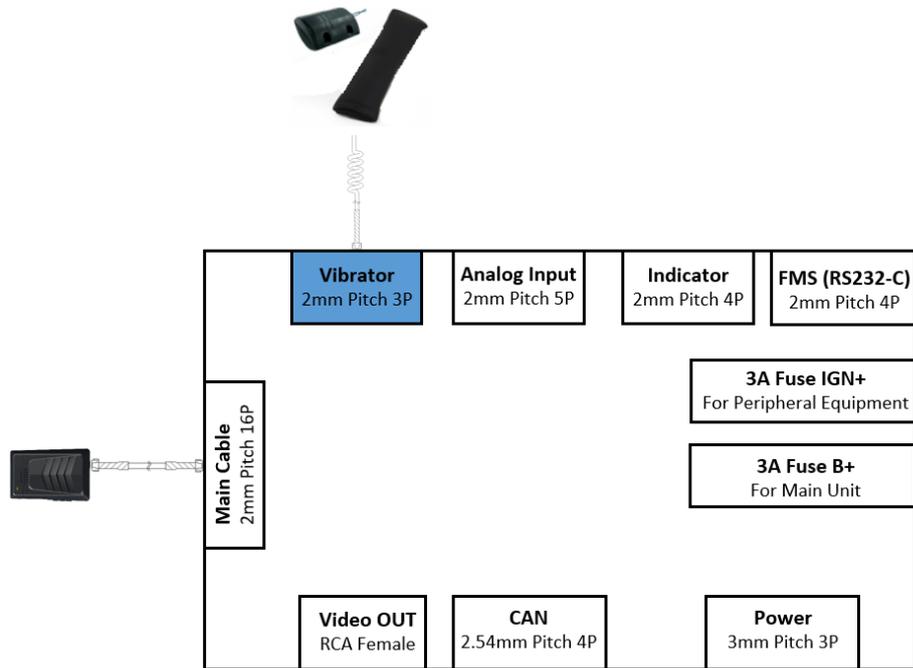

#### 3.5.1 Indicator

Connect Indicator using 4pin connector to Indicator port on PCI box.

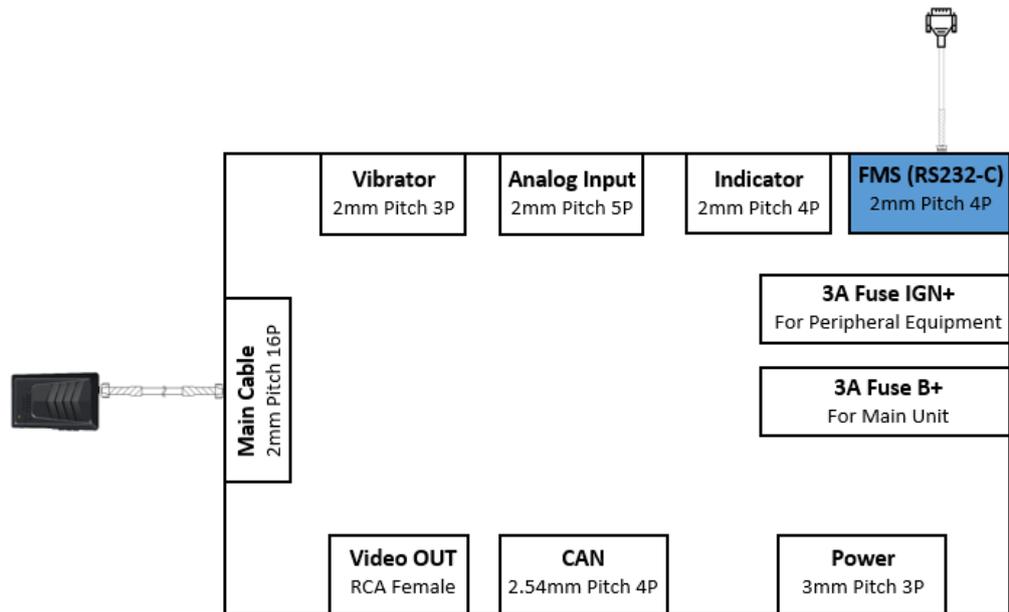

#### 3.5.2 Vibrator

Connect Vibrator using 3pin connector to Vibrator port on PCI box.

### 3.5.3 FMS Cable

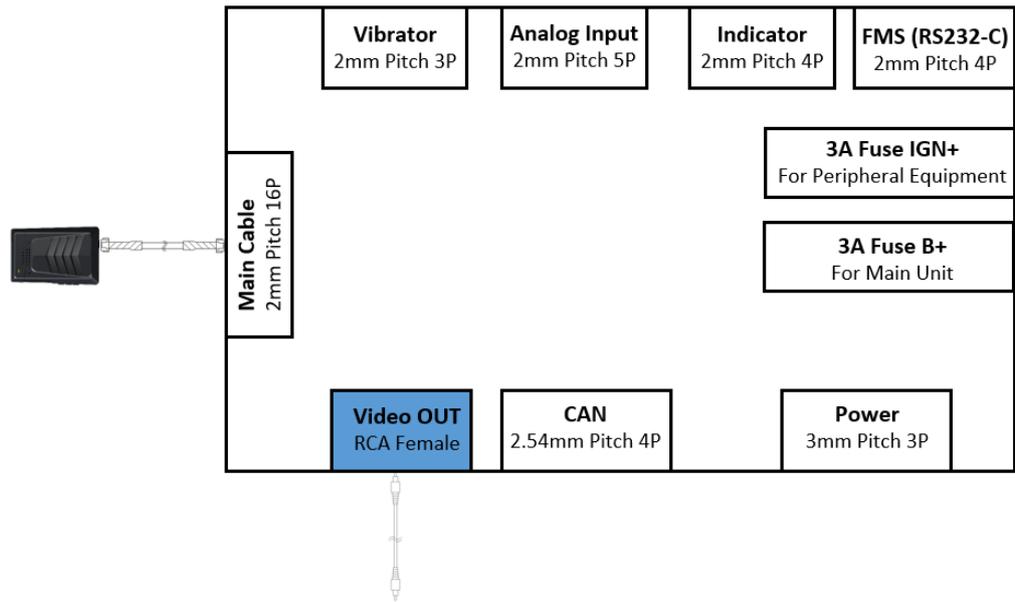

Use FMS cable and plug into FMS port on PCI box.

### 3.5.4 Video-Out Cable

Use RCA cable and plug into Video OUT port on PCI box.

This function does not provide other UI or graphics through via video-out.

Screenshot

### 3.6 Connect Rear Camera to MDAS-9 Following Chapter 3.4 in Attach MDAS-9

- ① Unscrew two cross recessed bolt marked in red on top side.

- ② Push the two clips at the bottom side marked in red.

- ③ Remove PCB unit from mounting frame completely.

- ④ Connect Rear Camera Cable to connector.

### 3.7 Reset MDAS-9

If MDAS-9 has any malfunction, reboot the system or clear reset MDAS-9.

**\* Caution: Once you clear reset MDAS-9, current settings such as CAN data or vehicle information will be removed**

- ① Reboot (External)

Press the Volume Down, Volume Up and Center Button at the same time.

- ② Reboot (Internal)

Press the lower small button in red box.

- ③ Clear Reset (Internal)  
Press the upper small button in red box.

## 4 PC and Android Phone Calibration

### 4.1 Driver Setup (ONLY SUPPORTS WINDOWS OS)

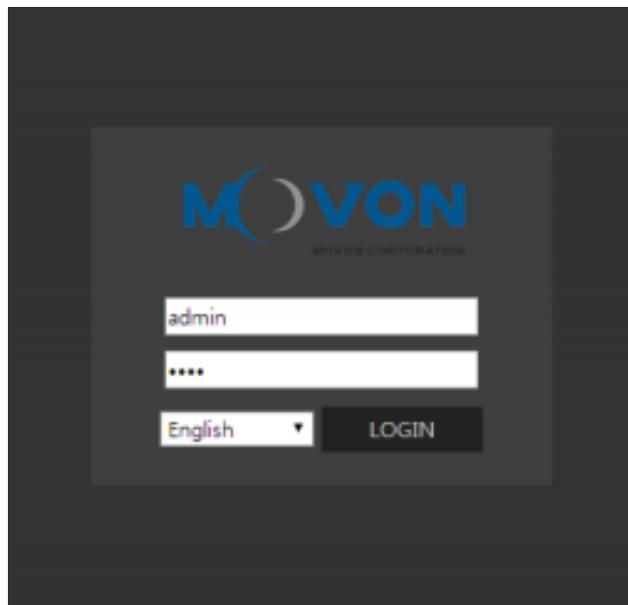

\* NOTE: Before you connect or start calibration, please install RNDIS driver first.

\* For more details, see Chapter 6.

### 4.2 Calibration Setup

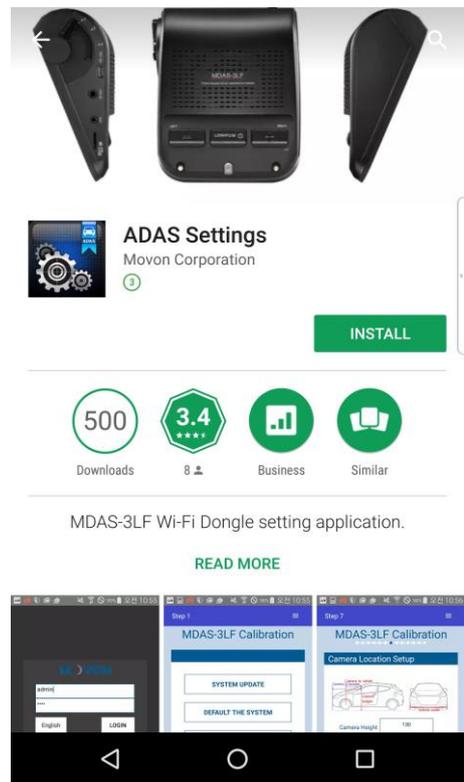

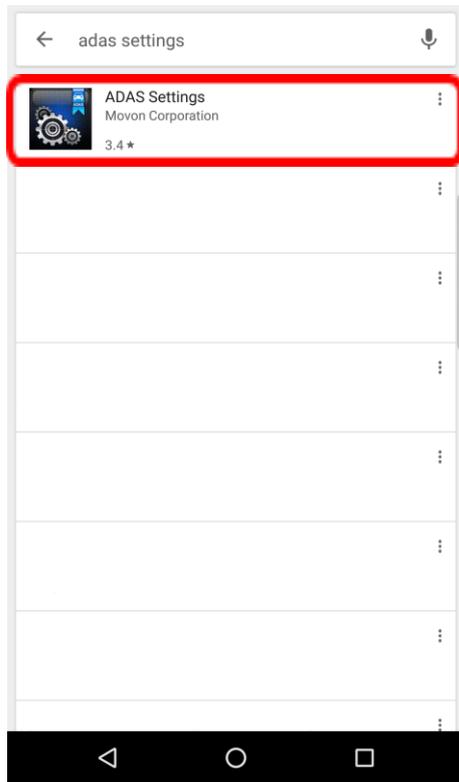

#### 4.2.1 Access MDAS-9 Calibration page via PC

- ① Connect MDAS-9 to PC using Micro USB cable with 5 pins.
- ② Start the engine.  
If you hear repeating beep sound, this means MDAS-9 is properly connected to computer.
- ③ Type 10.0.0.1 in an internet web browser to access MDAS-9 calibration page.  
(Chrome, Above Explorer 9, Firefox, and Safari are recommended)
- ④ You will see log in page below.  
Please enter your ID and password, and select language you want.

#### 4.2.2 Access MDAS-9 Calibration page via Android Phone

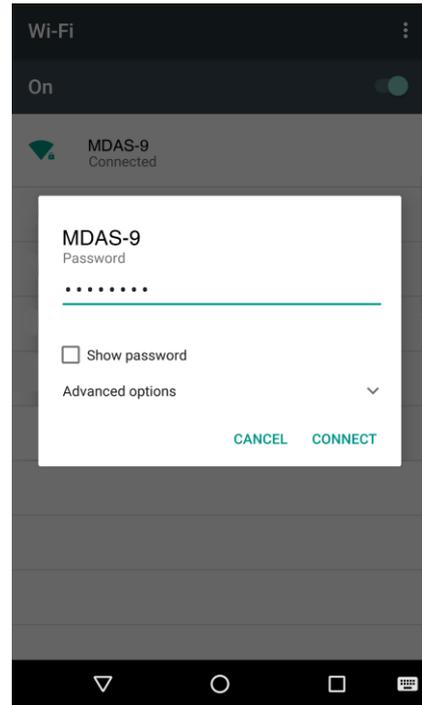

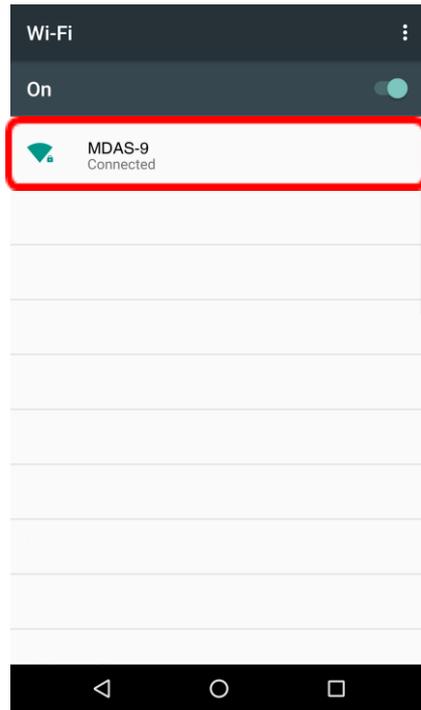

- ① Search and install the application “ADAS Settings” in Google Play Store.  
(MDAS supports only Google Android)

② Connect Wi-Fi Dongle to USB port on MDAS-9.

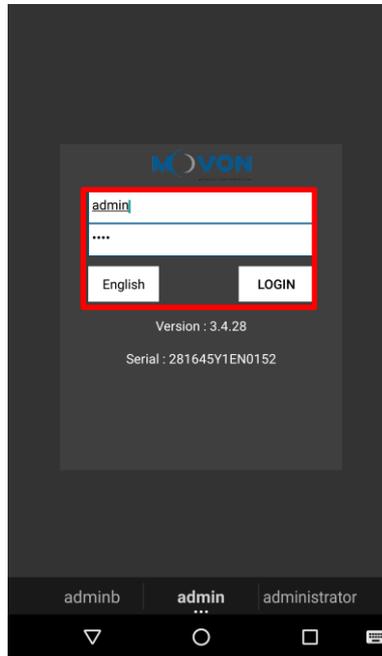

③ Find and connect to “MDAS-9” on your Wi-Fi setting page.  
(Password: 12345678)

- ④ Return to the ADAS Settings app.  
Select “MDAS-9” and click the “NEXT” button.

- ⑤ On the Log-in Page below,  
Please enter your ID and Password, then select language you want.

- ⑥ If you can see the MDAS-9 Calibration page below, you are ready for the Calibration procedure now.

#### 4.2.3 Select Vehicle Signal Types

##### 4.2.3.1 Vehicle Data File (CAN-BUS)

In case of using CAN Data, you have to choose “Vehicle Info File” tab.  
MDAS-9 only recognizes encrypted CAN data on our Database site;  
<http://info.mdas.co.kr>  
(For further information, check Chapter 5. How to Download CAN data)

\* NOTE: MDAS-9 only reads a file named “mdasinfo.dat”.

If you have downloaded multiple files and they are named like  
“mdasinfo(1).dat” or “mdasinfo(2).dat”, they cannot be recognized in  
MDAS-9.

Upload vehicle data file

Vehicle info file	Analog (GPIO)	GPS (Speed)
<div style="display: flex; justify-content: center; align-items: center; gap: 10px;"> <input type="button" value="Choose File"/> No file chosen         </div> <p style="margin-top: 10px;">Please click the right arrow button to proceed to next step</p>		

#### 4.2.3.2 Analog (GPIO)

In case of using Analog signals for all vehicle data, you do not need to download Vehicle Data file.

Just click the Analog (GPIO) tab. Enter speed correction value and RPM correction value. Change polarity for turn signals and brake signal based on the vehicle.

Upload vehicle data file

Vehicle info file	Analog (GPIO)	GPS (Speed)										
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 60%;">Speed correction factor</td> <td style="border: 1px solid #ccc; padding: 2px 10px;">5000</td> </tr> <tr> <td>Left turn signal polarity</td> <td style="border: 1px solid #ccc; padding: 2px 10px;">High ▼</td> </tr> <tr> <td>Right turn signal polarity</td> <td style="border: 1px solid #ccc; padding: 2px 10px;">High ▼</td> </tr> <tr> <td>Brake signal polarity</td> <td style="border: 1px solid #ccc; padding: 2px 10px;">High ▼</td> </tr> <tr> <td>RPM correction factor</td> <td style="border: 1px solid #ccc; padding: 2px 10px;">5000</td> </tr> </table>			Speed correction factor	5000	Left turn signal polarity	High ▼	Right turn signal polarity	High ▼	Brake signal polarity	High ▼	RPM correction factor	5000
Speed correction factor	5000											
Left turn signal polarity	High ▼											
Right turn signal polarity	High ▼											
Brake signal polarity	High ▼											
RPM correction factor	5000											

#### 4.2.3.3 GPS

In case of receiving speed and turn signal information from GPS, click GPS tab. Change polarity for turn signals and brake signal. Enter RPM correction value.

Upload vehicle data file

Vehicle info file	Analog (GPIO)	GPS (Speed)
<div style="display: flex; justify-content: space-between;"> <div style="width: 60%;">Left turn signal polarity</div> <div style="width: 35%; text-align: right;">High ▾</div> </div> <div style="display: flex; justify-content: space-between; margin-top: 5px;"> <div style="width: 60%;">Right turn signal polarity</div> <div style="width: 35%; text-align: right;">High ▾</div> </div> <div style="display: flex; justify-content: space-between; margin-top: 5px;"> <div style="width: 60%;">Brake signal polarity</div> <div style="width: 35%; text-align: right;">High ▾</div> </div> <div style="display: flex; justify-content: space-between; margin-top: 5px;"> <div style="width: 60%;">RPM correction factor</div> <div style="width: 35%; text-align: right;">5000</div> </div>		

#### 4.2.4 Vehicle Information Check

In this page, you can check whether MDAS-9 is receiving vehicle data properly.

##### 4.2.4.1 Verify Speed Signal

Start the engine and drive slowly in a safe place to see whether speed is corresponding with the vehicle's speed gauge. If it is not, you can simply adjust it.

Drive and maintain the speed around 40km/h (24mi/h). Click the first "Correction" button on the right. Then MDAS-9 will set a new speed.

Vehicle signal check

Speed :	Speed	CAN→Analog	Correction
Left :	◀	CAN→Analog	Correction
Right :	▶	CAN→Analog	Correction
Brake :	●	CAN→Analog	Correction
RPM :	RPM	CAN→Analog	Correction

##### 4.2.4.2 Verify Turn Signal

The arrow icon will be ON, only if you are using turn signal for left or right direction respectively. If the arrow icon is always ON, click the second or the third "Correction" button to change signal polarity.

Make sure that the arrow icon is ON only when you are using turn signals.

#### 4.2.5 Camera Location and Vehicle Measurement

Camera location and vehicle measurement can affect MDAS-9's performance. It is very important put accurate data for the best performance.

Camera location setup

cm / inch  image

Camera height

Camera center

Camera to wheel

Vehicle width

Camera to bumper

Camera Height	Distance from ground to the center of camera lens.
Camera Center	Distance from the center of windshield to camera lens “-”: Left Side / “+”:Right Side (If MDAS-9 is attached 5cm to the right from the center, input 5. If MDAS-9 is attached 5cm to the left from the center, input -5.)
Camera to Wheel	Distance from the camera to the center of the wheel. <b><u>For trucks or buses, some vehicles' wheels are located behind.</u></b> <b><u>In this case, please input 20cm.</u></b>
Vehicle Width	Distance between the wheels. Measure distance from left outside boarder to right outside boarder of the wheels.
Camera to bumper	Distance from the camera lens to the end of the bumper.

#### 4.2.6 Camera Angle

Adjust the camera angle knob to locate the horizon between the red guide lines.

Camera angle setup

\* Please adjust the angle to locate the horizon line between the red guide lines

In case of indoor installation or somewhere you cannot see the horizon properly, use same data to "**Camera Height**". Mark the same height on the wall apart about 3 ~ 5 meters from the vehicle.

4.2.6.1 Fine Camera Angle

For better accuracy of ADAS, locate the yellow dotted line in the horizon as close as possible.

Camera angle setup

Horizon(Vanishing) Line  ▲ ▼

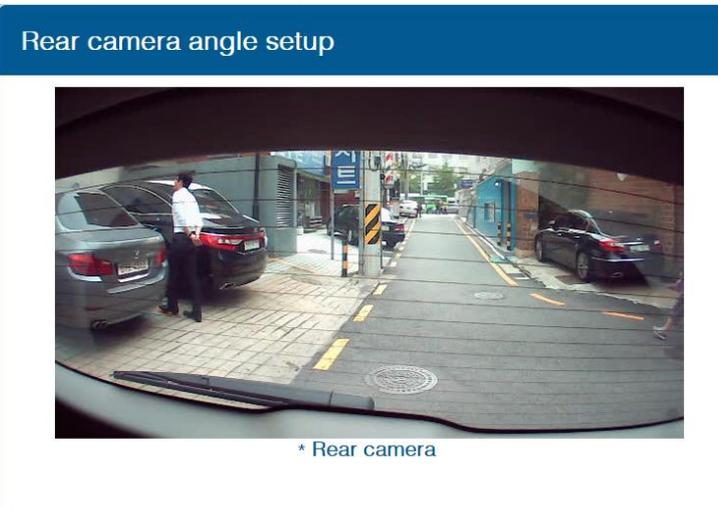

#### 4.2.7 Hood Line

Locate the red line at the end of the vehicle's hood line to remove the useless area.

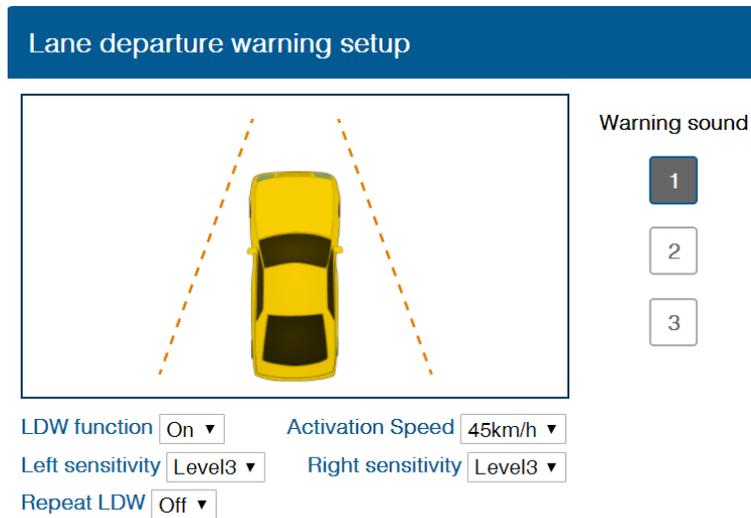

#### 4.2.8 Rear Camera Setup

For better angle of Rear Camera (DVR), adjust the camera module by rotating it.

#### 4.2.9 Lane Departure Warning (LDW) Sensitivity

You can adjust the LDW Sensitivity for your convenience.

- ① Enable LDW function. (On / Off)
- ② Set the Activation Speed (15, 30, 45, 60, 75km/h)
- ③ Set the sensitivity of LDW warning on a scale of 1 to 5.  
As the level gets higher, you will hear the warning sound earlier.
- ④ Enable Repeat LDW (On / Off)
- ⑤ Warning sound: Select preferred warning sound for LDW.

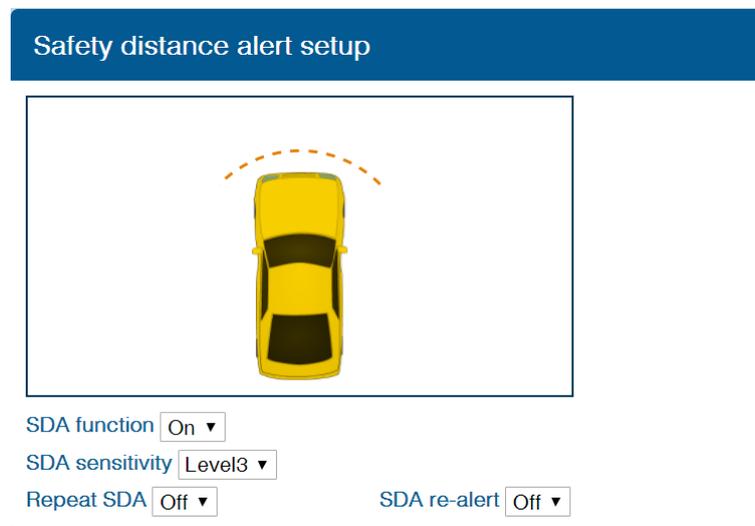

#### 4.2.10 Forward Collision Warning (FCW) Sensitivity

You can adjust the FCW Sensitivity for your convenience.

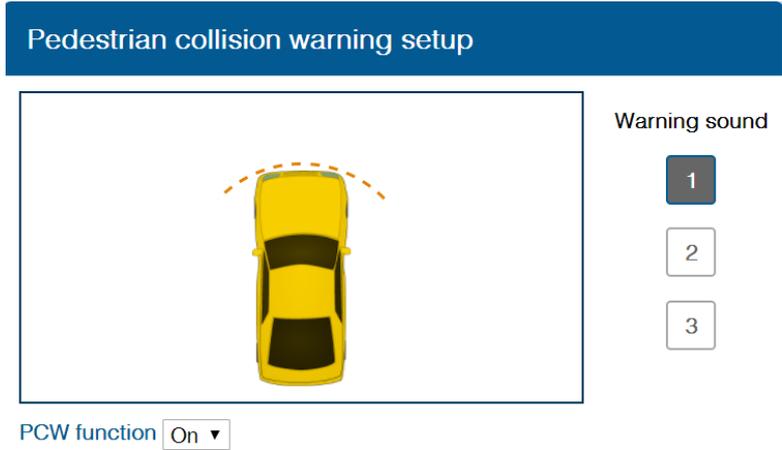

- ① Enable FCW function. (On / Off)
- ② Set the sensitivity of FCW warning on a scale of 1 to 5.  
As the level gets higher, you will hear the warning sound earlier.
- ③ Enable Repeat FCW (On / Off).
- ④ Enable Sync with Brake (On / Off).  
If turning on this function, FCW alarm doesn't alert while depressing the brake pedal once.
- ⑤ Warning sound: Select preferred warning sound for FCW

#### 4.2.11 Safety distance alert setup

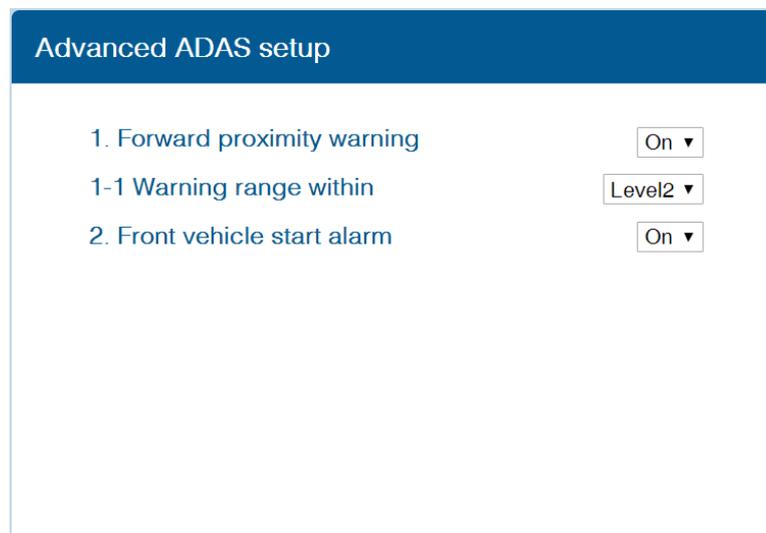

- ① Enable SDA function. (On / Off)
- ② Set the sensitivity of SDA on a scale of 1 to 5.  
As the level gets higher, you will hear the warning sound earlier.
- ③ Repeat SDA and SDA re-alert can be changed. (On / Off)

#### 4.2.12 Pedestrian collision warning setup

- ① Enable PCW function. (On / Off)
- ② Warning sound: Select preferred warning sound for PCW.

#### 4.2.13 Advanced ADAS setup

- ① Enable Forward Proximity Warning function. (On / Off)
- ② Set the warning range on a scale of 1 to 3.  
As the level gets higher, you will hear the warning sound earlier.
- ③ Enable Front vehicle start alarm. (On / Off)

#### 4.2.14 DVR (Dashcam) setup

### DVR(Dashcam) Setup

1. Time  
 Asia/Seoul  
 Jun 27 2017 12:30

2. Voice recording On ▼

3. Gravity sensor sensitivity Level3 ▼

4. Driving log with video On ▼

5. Recording ratio(Continuous:Event:User) 8:1:1 ▼

- ① Time: Set the date and time.
- ② Enable Voice recording function (On / Off).
- ③ Set Gravity sensory sensitivity on a scale of 1 to 5.  
It is for event recording.
- ④ Enable Driving log with video. (On / Off).
- ⑤ Set the Recording ratio. (Continuous : Event : User)  
You can choose between 5 ratios. (8:1:1 / 7:2:1 / 6:3:1 / 6:2:2)

#### 4.2.15 Fleet management setup

### Fleet management setup

1. Speed limit warning Off ▼

2. Transmit data RS-232 Off ▼

3. Lock volume button control Off ▼

4. Break time alarm Off ▼

5. Vibration device

5-1. Lane departure warning Off ▼

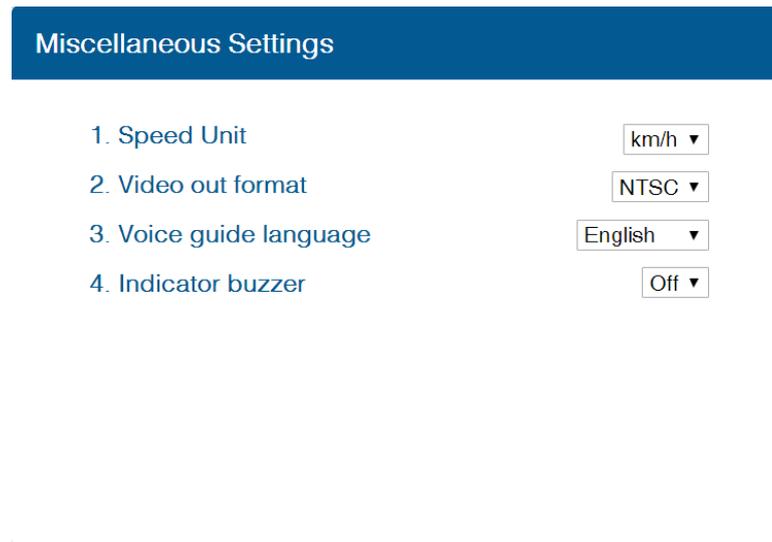

5-2. Forward collision warning Off ▼

5-3. Pedestrian collision warning Off ▼

- ① Set Speed limit warning. (Off, 80, 90, 100, 110, 120, 140km/h)
- ② Enable Transmit data RS-232. (On / Off)

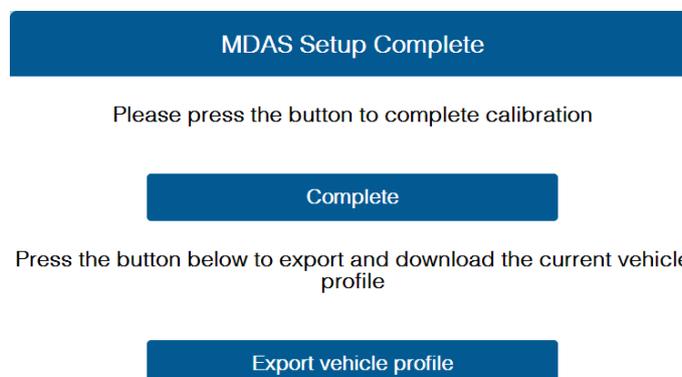

- ③ Set Lock volume button control on a scale of 1 to 5 and Off.
- ④ Set Break time alarm on a scale of 1 to 6 hours and Off.
- ⑤ Enable Vibration setting for LDW, FCW, PCW (On / Off / Both).

#### 4.2.16 Miscellaneous Settings.

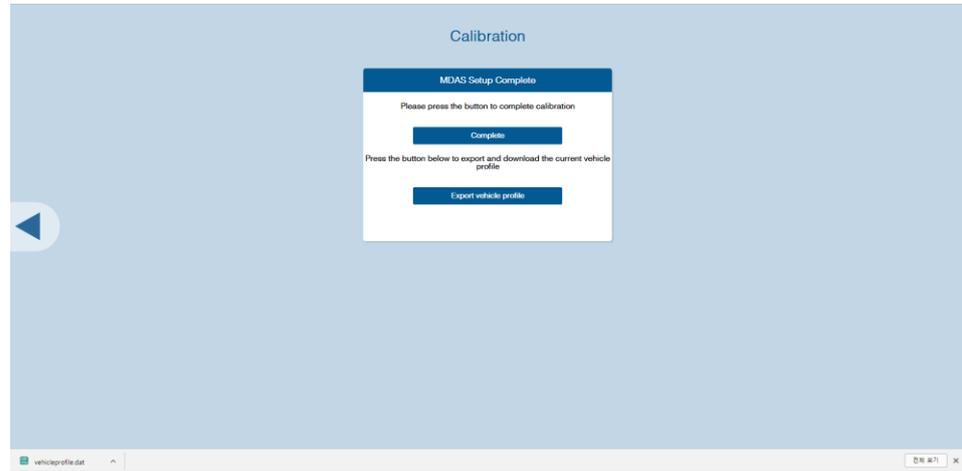

- ① Set Speed Unit (km/h or MPH).
- ② Set Video out format (NTSC / PAL)
- ③ Set Voice guide language  
(English / Korean / Chinese / Spanish / Japanese / Hebrew)
- ④ Enable Indicator buzzer (On / Off)

#### 4.2.17 MDAS Setup Complete

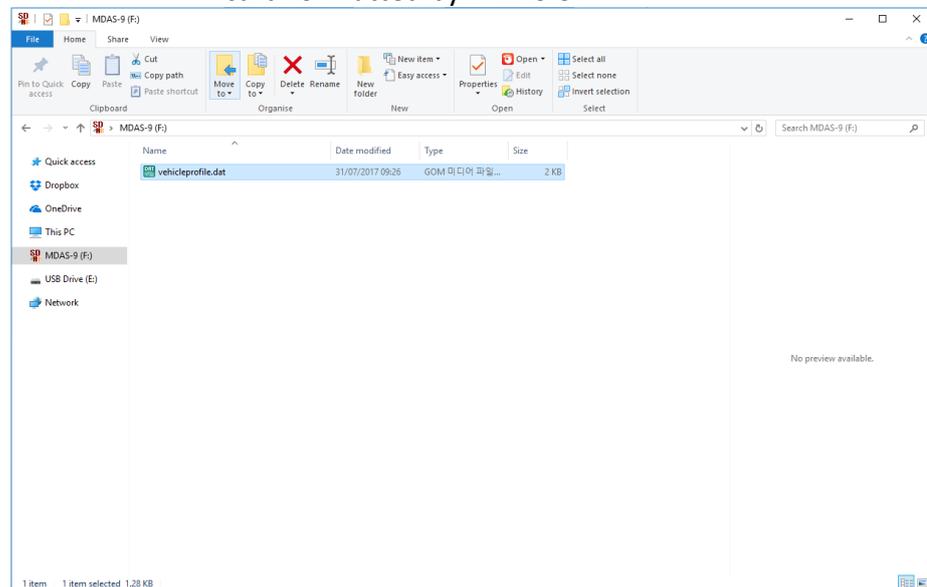

- ① Click “Complete” button to finish Calibration setup. Then MDAS-9 will be rebooted automatically.
- ② Click “Export vehicle profile” button, if you want to download vehicleprofile.dat.

\* Procedure of applying vehicleprofile to MDAS-9.

- I. Copy and paste vehicleprofile.dat into the micro SD card formatted by MDAS-9.

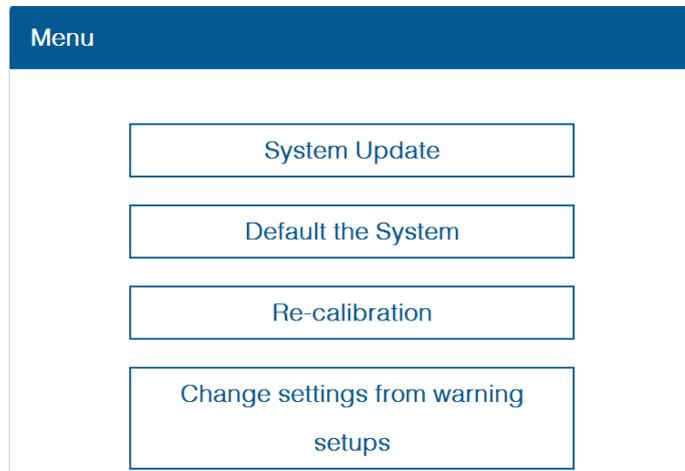

- II. Insert the micro SD card into the MDAS-9 you want to apply vehicleprofile.
- III. MDAS-9 will be rebooted automatically. Then exported vehicleprofile is adopted new MDAS-9.

#### 4.3 Setting Modification

Once MDAS-9 is calibrated well, you will see different menu when you access

MDAS-9.  
4.3.1 Menu Description

- System Update: The latest firmware published in the website ([www.mdas.co.kr](http://www.mdas.co.kr)) can be updated here.
- Default the System: It can be cleared and reset to the installation default.
- Re-calibration: Change current settings from “Vehicle Information Check”
- Change settings from warning setups: Change current settings from “Lane Departure Warning”

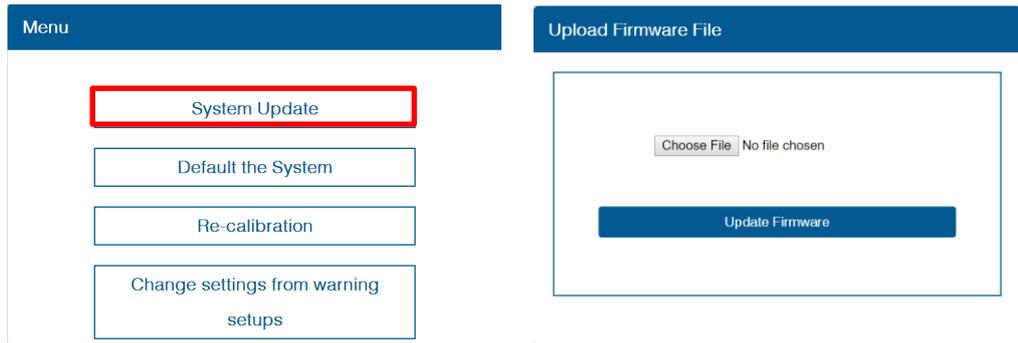

4.3.2 Update Firmware

You can update your firmware on your own.

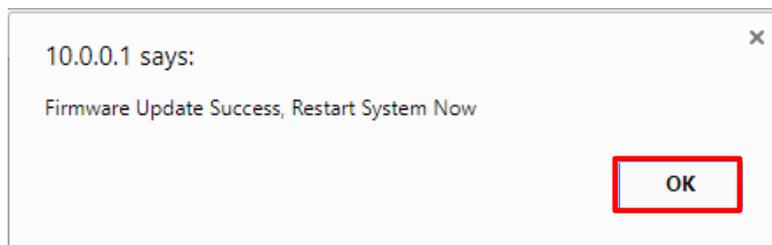

- ① Go to <http://www.mdas.co.kr/eng/> and download the latest firmware

- ② Select “System Update” menu to upload the latest firmware.  
After uploading the file, click “Update Firmware” button below.

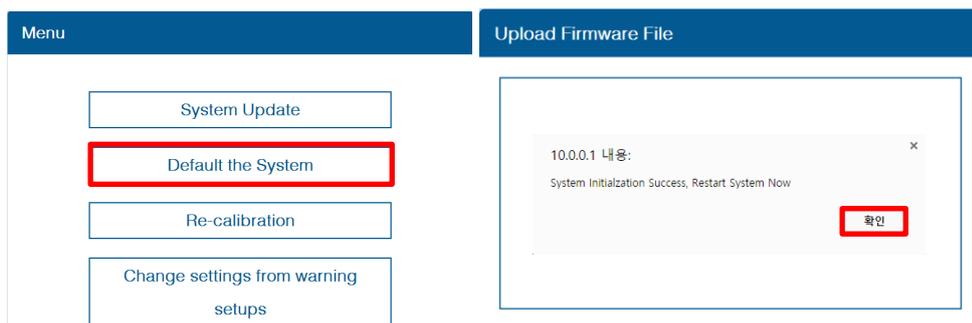

③ You are done when you see a pop up message below.

\*NOTE: Do not touch or change anything while updating.  
Unless, MDAS-9 might lose its data and stop working.

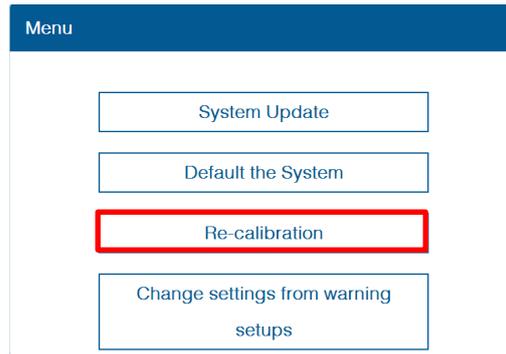

#### 4.3.3 Default MDAS Settings

If you want to remove all data and return to a factory setting, click the “Default the System” menu and wait until you see a message below.

#### 4.3.4 Re-calibration

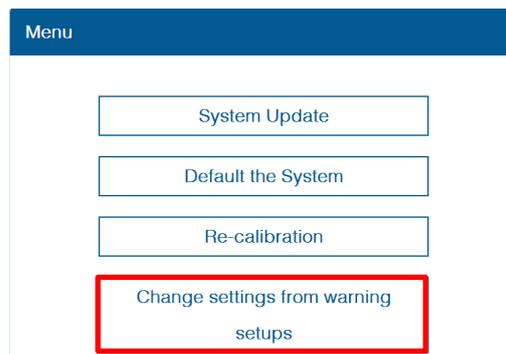

If you click this menu, you will restart from 4.2.4.1 Vehicle Signal Check.

#### 4.3.5 Change settings from warning setups

If you click this menu, you will restart from 4.2.9 Lane Departure Warning (LDW) Sensitivity

If you only want to change settings about warning setups, please press this. It will start from Lane departure warning sensitivity menu.

## 5 How to Download CAN Data

### 5.1 Register in Vehicle Database

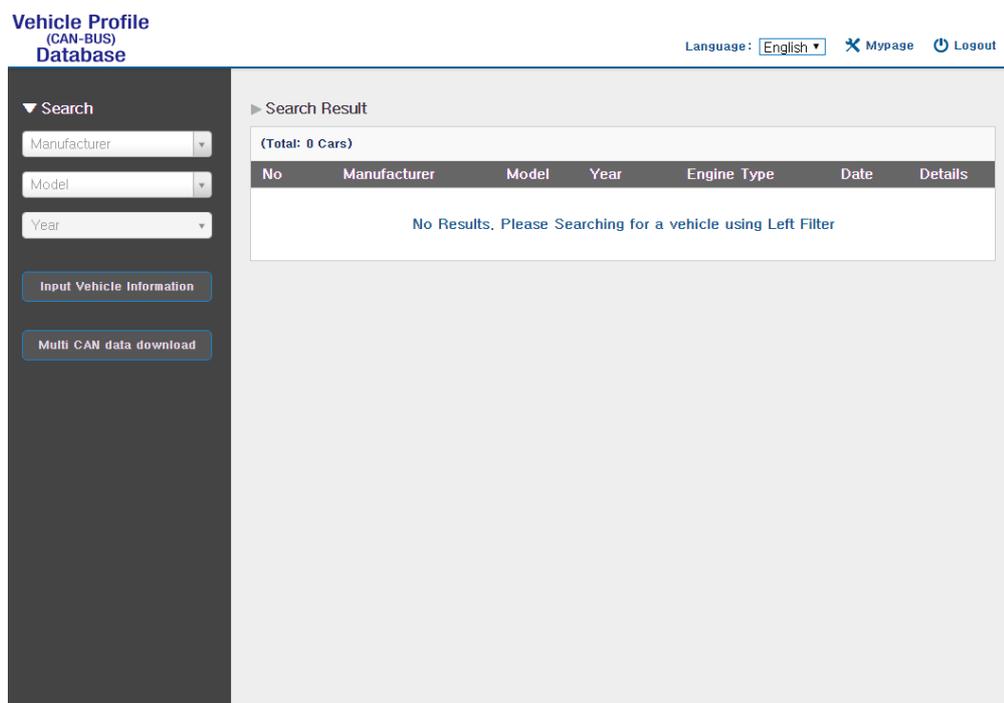

Open a web browser and enter <http://info.mdas.co.kr/>

You need to register and get an approval to log in. Please contact Movon Corp. or your local distributor for the approval.

### 5.2 Download CAN Data file

Once you log in, you will see Vehicle profile database page.

Select Manufacturer, Model name and manufactured Year for the vehicle you need. You will see results on the right side of the page.

**Vehicle Profile (CAN-BUS) Database** Language: English Mypage Logout

▼ Search

- ② Download RNDIS driver and unzip it.
- ③ Press Window key + R. Type “devmgmt.msc”.  
You will see Device manager and **a USB serial Port (COM x)** under **Ports (COM & LPT)**.

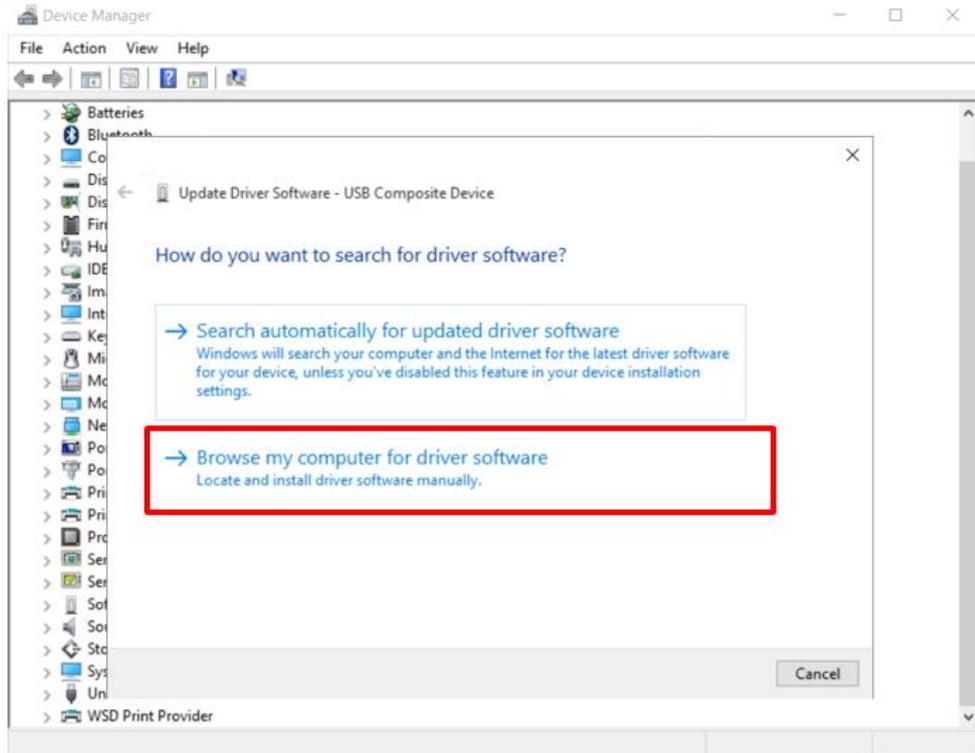

- ④ Click it using the right button of your mouse, then click “Properties”.

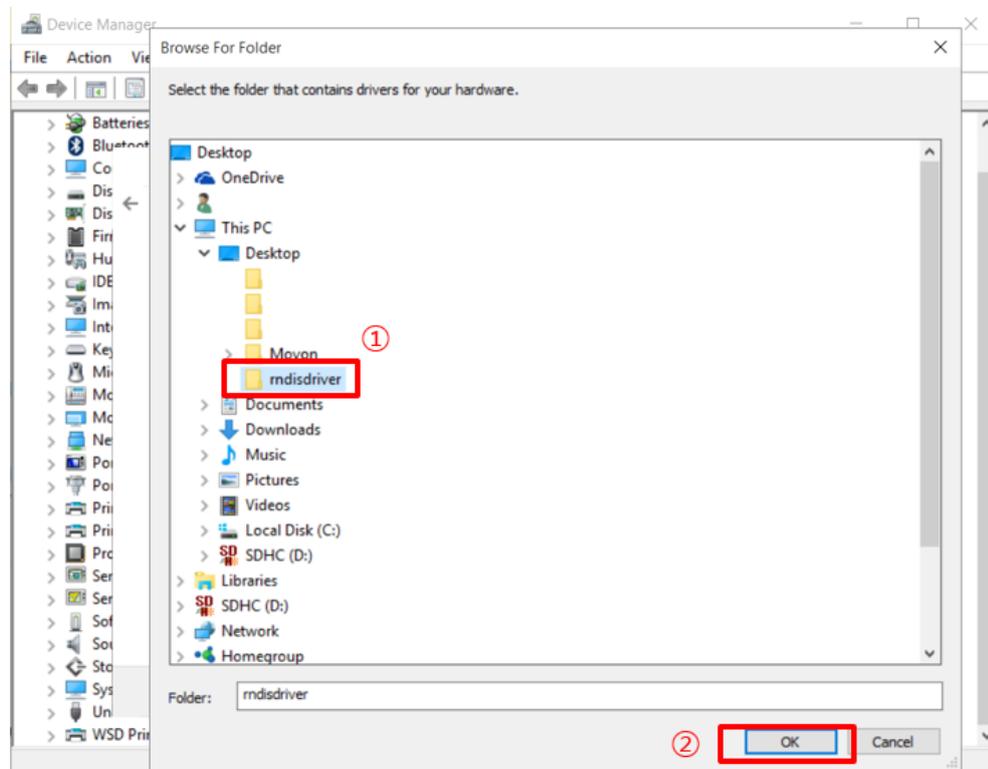

- ⑤ In the newly popped up window, Go to “Driver” tab, and click “Update Driver”

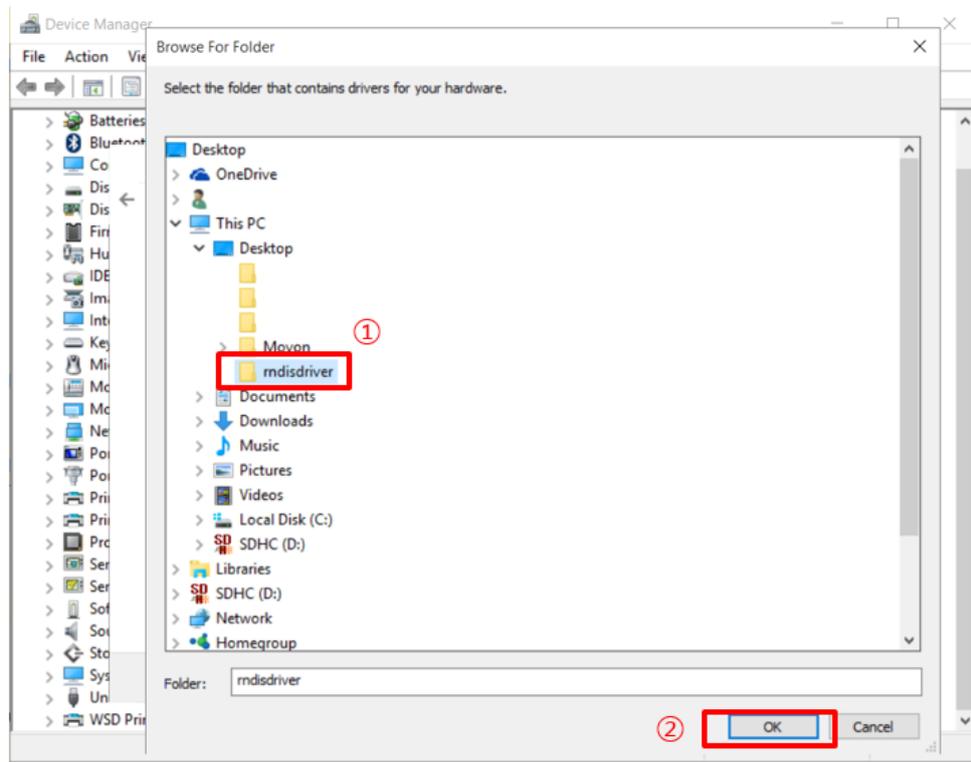

- ⑥ Select “Browse my computer for driver software”.

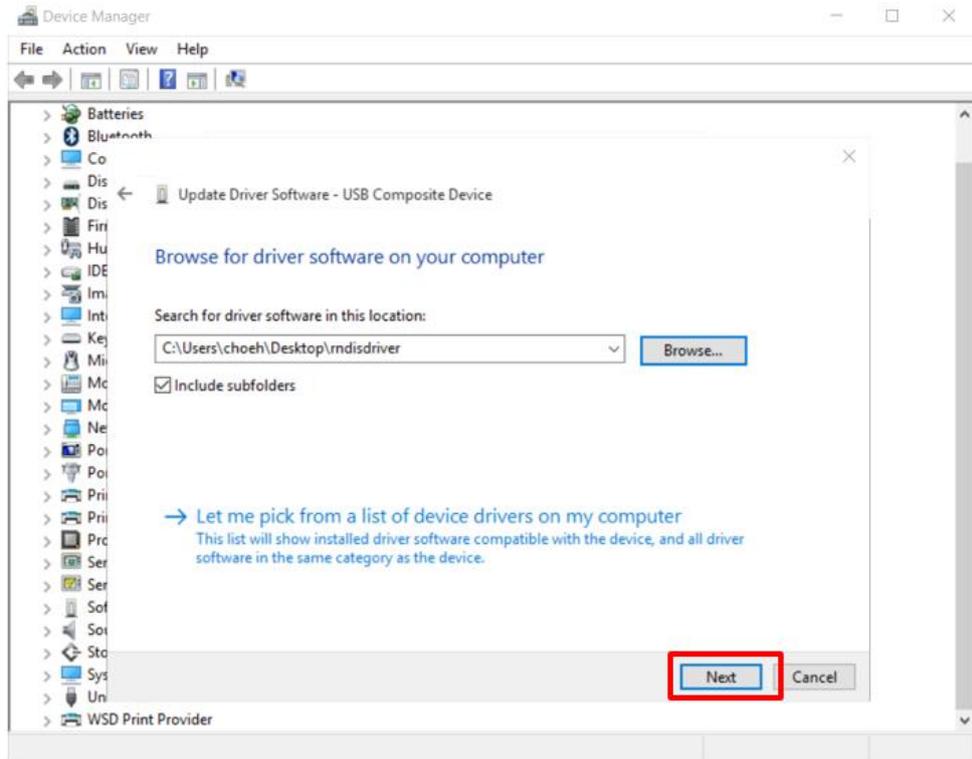

⑦ Click "Browser..." button and "Browse For Folder" window will pop up.

- ⑧ Choose “rndisdriver”.  
\* Remember the path where you downloaded and unzipped the file \*

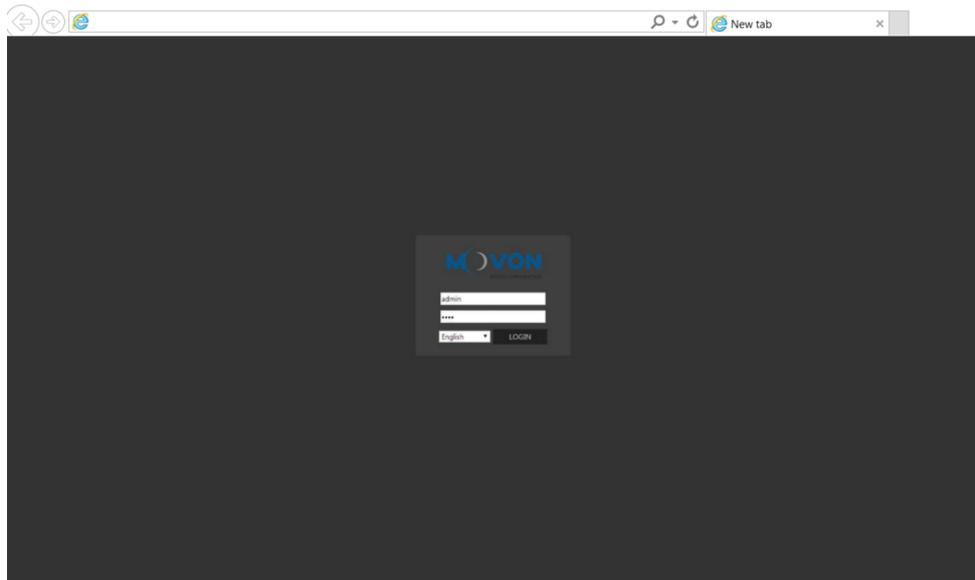

- ⑨ Press “Next” on the page below.

After installing the driver, you can close the windows.

- ⑩ Open a web browser and type <http://10.0.0.1>

If you see MDAS-9 page like above, you have done everything perfectly.
