### 6.5 REFLOW SOLDERING PROFILE

Pb-free reflow profile requirements

| Parameter                       | Reference | Specification   |
|---------------------------------|-----------|-----------------|
| Average temperature gradient in |           | 2.5°C/s         |
| preheating                      |           |                 |
| Soak time                       | tsoak     | 2-3 minutes     |
| Time above 217°C                | t1        | 60 s            |
| Time above 230°C                | t2        | 50 s            |
| Time above 250°C                | t3        | 5 s             |
| Peak temperature in reflow      | Tpeak     | 255°C (-0/+5°C) |
| Temperature gradient in cooling |           | Max -5°C/s      |

This profile is the minimum requirement for evaluating soldering heat resistance of components. Heat transfer method used for reflow soldering is hot air convection. The actual air temperatures used to achieve the specified profile is higher and largely dependent on the reflow equipment.
